- Matroids
- Oriented matroids
- Tutte polynomial

Some subjects :

- Duality
- Principal extensions
- Products on matroids
- Binary matroids
- Activities of elements in bases
- Orientability
- Signature of bases
- Convexity and applications
- Shannon switching game
- Linear programming
- Tutte polynomial (special evaluations)
- Polynomials associated to morphism of matroids
- Generalization to 3 variables polynomial

Las Vergnas Cube conjecture

M. Las Vergnas, J.-P. Roudneff, I Saläun, Regular polytopes, preprint 1989, 12pp.,
unpublished.

Las Vergnas Cube conjecture

M. Las Vergnas, J.-P. Roudneff, I Saläun, Regular polytopes, preprint 1989, 12pp., unpublished.

Conjecture (Las Vergnas 1989) The affine cube has a unique class of orientation.

Las Vergnas Cube conjecture

M. Las Vergnas, J.-P. Roudneff, I Saläun, Regular polytopes, preprint 1989, 12pp., unpublished.

Conjecture (Las Vergnas 1989) The affine cube has a unique class of orientation.

Somehow the orientation of the real affine cube is encoded in the underlying matroid.

Las Vergnas Cube conjecture

M. Las Vergnas, J.-P. Roudneff, I Saläun, Regular polytopes, preprint 1989, 12pp., unpublished.

Conjecture (Las Vergnas 1989) The affine cube has a unique class of orientation.

Somehow the orientation of the real affine cube is encoded in the underlying matroid.

Theorem (J. Bokowski, A. Guedes de Oliveira, U. Thiemann, A. Velosos da Costa 1996) Las Vergnas conjecture has positive answer for $n \leq 7$.

Las Vergnas simplex conjecture

M. Las Vergnas, Convexity on oriented matroids, *J. ComB. Th. Ser B* **29** (1980), 231-243.

Conjecture (Las Vergnas 1980) Every loopless oriented matroid has at least one acyclic reorientation with exactly r extreme points.

Las Vergnas simplex conjecture

M. Las Vergnas, Convexity on oriented matroids, *J. ComB. Th. Ser B* **29** (1980), 231-243.

Conjecture (Las Vergnas 1980) Every loopless oriented matroid has at least one acyclic reorientation with exactly r extreme points.

Theorem (Shannon 1979) If M is realizable then there exists at least n simplexes.

Tutte polynomial

Michel Las Vergnas, Extensions normales d'un matroïdes, polynôme de Tutte d'un morphisme, *C.R. Acad. Sci. Paris Sér. A*, **280** (1975), A1479-A1482

Tutte polynomial

Michel Las Vergnas, Extensions normales d'un matroïdes, polynôme de Tutte d'un morphisme, *C.R. Acad. Sci. Paris Sér. A*, **280** (1975), A1479-A1482

Introduced a 3-variable polynomial associated with two matroids M and M' related by a **matroid perspective** (every circuit of M is the union of circuits of M').

$$t(M, M'; x, y, z) = \sum_{X \subseteq E} (x - 1)^{r(M') - r_{M'}(X)} (y - 1)^{|X| - r_M(X)} z^{r(M) - r(M') - (r_M(X) - r_{M'}(X))}$$

Tutte polynomial

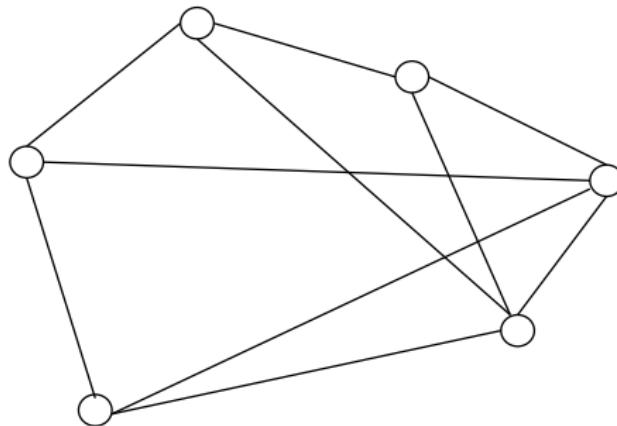

Michel Las Vergnas, Extensions normales d'un matroïdes, polynôme de Tutte d'un morphisme, *C.R. Acad. Sci. Paris Sér. A*, **280** (1975), A1479-A1482

Introduced a 3-variable polynomial associated with two matroids M and M' related by a **matroid perspective** (every circuit of M is the union of circuits of M').

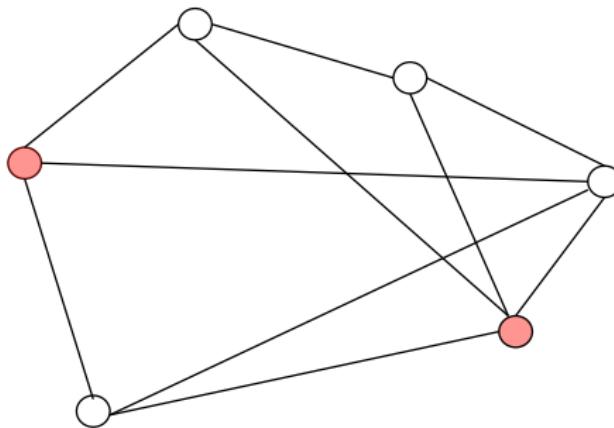

$$t(M, M'; x, y, z) = \sum_{X \subseteq E} (x - 1)^{r(M') - r_{M'}(X)} (y - 1)^{|X| - r_M(X)} z^{r(M) - r(M') - (r_M(X) - r_{M'}(X))}$$

If $M = M'$ then $t(M, M'; x, y, z) = t(M; x, y)$.

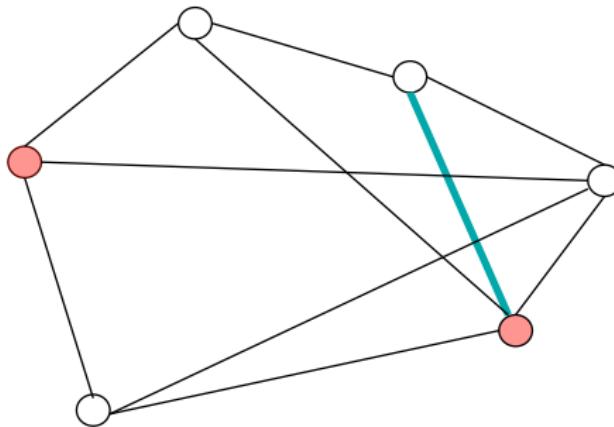

Shannon switching game

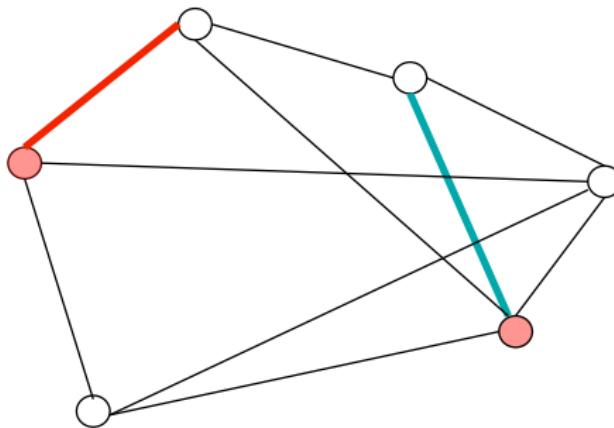

Shannon switching game

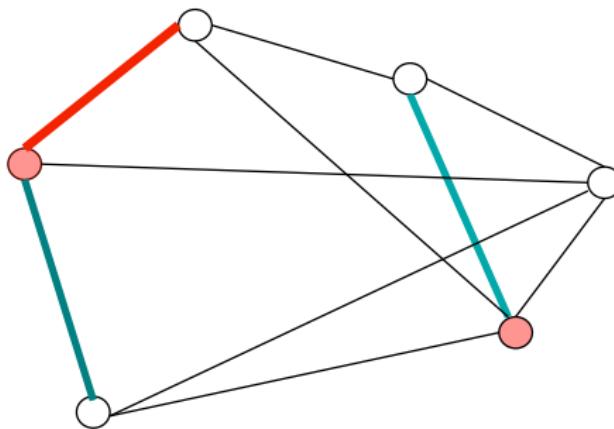

Shannon switching game

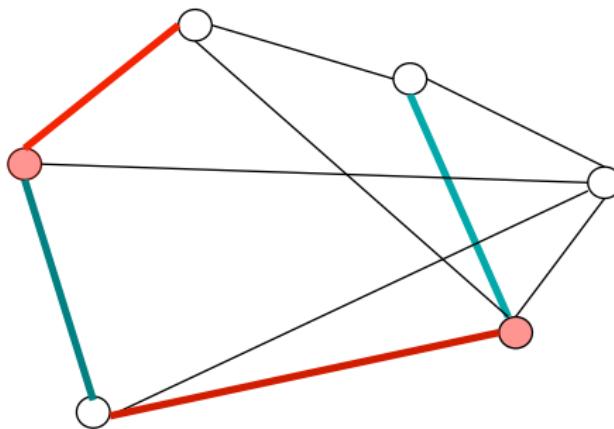

Shannon switching game

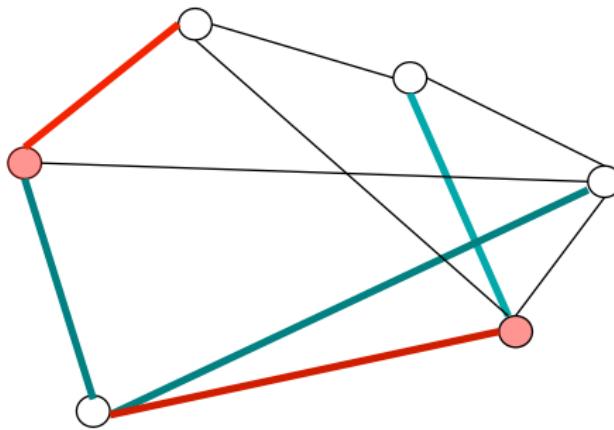

Shannon switching game

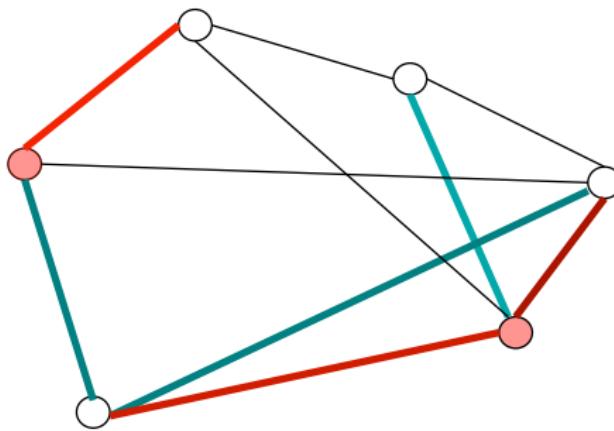

Shannon switching game

Theorem (Lehman 1964) Solution of Shannon switching game in a wider context of matroids

- (1) polynomial characterizations of winning and losing games and polynomial strategies for graphs and matroids
- (2) Any position can be decided in polynomial time

Shannon switching game

Theorem (Lehman 1964) Solution of Shannon switching game in a wider context of matroids

- (1) polynomial characterizations of winning and losing games and polynomial strategies for graphs and matroids
- (2) Any position can be decided in polynomial time

Y. Hamidoune, M. Las Vergnas, Directed switching games on graphs and matroids, *J. Combin. Th. Ser. B*, **40** (1986), 237-269

Shannon switching game

Theorem (Lehman 1964) Solution of Shannon switching game in a wider context of matroids

- (1) polynomial characterizations of winning and losing games and polynomial strategies for graphs and matroids
- (2) Any position can be decided in polynomial time

Y. Hamidoune, M. Las Vergnas, Directed switching games on graphs and matroids, *J. Combin. Th. Ser. B*, **40** (1986), 237-269

Introduced directed version of Shannon game (**directed path**).

Shannon switching game

Theorem (Lehman 1964) Solution of Shannon switching game in a wider context of matroids

- (1) polynomial characterizations of winning and losing games and polynomial strategies for graphs and matroids
- (2) Any position can be decided in polynomial time

Y. Hamidoune, M. Las Vergnas, Directed switching games on graphs and matroids, *J. Combin. Th. Ser. B*, **40** (1986), 237-269

Introduced directed version of Shannon game (**directed path**).

They proved that White has a winning strategy if and only if there exist two edge-disjoint trees on a same set of vertices containing the two distinguished vertices (however the strategy is more elaborated).

Shannon switching game

MICHEL'S QUESTION :

Can the positional version be decided in polynomial time ?

Shannon switching game

MICHEL'S QUESTION :

Can the positional version be decided in polynomial time ?

Y. Hamidoune, Michel Las Vergnas, Directed switching games II. The Arborescence game, *Disc. Math.*, **165/166** (1997), 395-402

Introduced the arborescence game (a spanning arborescence rooted at a given vertex).

Shannon switching game

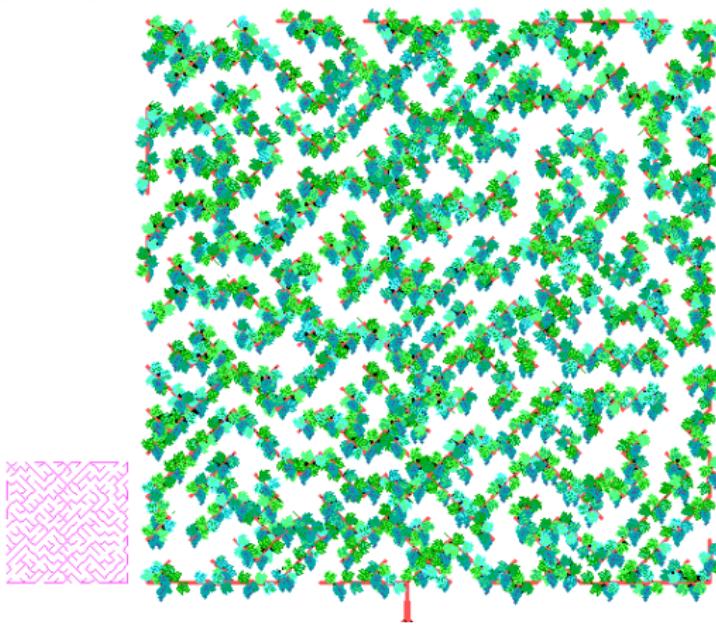

MICHEL'S QUESTION :

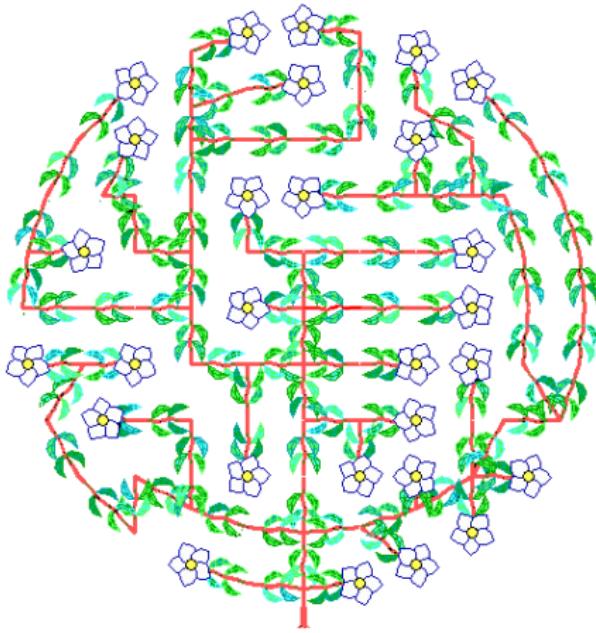

Can the positional version be decided in polynomial time ?

Y. Hamidoune, Michel Las Vergnas, Directed switching games II. The Arborescence game, *Disc. Math.*, 165/166 (1997), 395-402

Introduced the arborescence game (a spanning arborescence rooted at a given vertex).

They characterized winning positions when the graph is a disjoint union of two spanning trees.
